Thread: [Hiding viruses in photos](#)

todor100 - September 19, 2018, 12:31 pm

Is there a way to hide a virus in photo (and disable the security) and when the person open the photo to infect his PC?

[Some kind of virus like can seriously f*ck the PC ?]

If you have any methods please post them down below.

This is an age-old dream in my opinion.

But I guess, it could be possible. I doubt it.

maybe an exploit worth thousands of dollars

CyberStrike - September 19, 2018, 4:18 pm

polyglot images? generally it's a good idea to have a jmp instruction to point at your code.

https://www.rapid7.com/db/modules/encoder/x86/bmp_polyglot

Edit: Little more awake not by much but a few more resources:

<https://github.com/peewpw/Invoke-PSImage>

(placing powershell into image)

https://github.com/DamonMohammadbagher/NativePayload_Image

i am selling doc exploit silent and fud 100% you can directly convert exe to doc
join me on skype exploitd31 and see live on teamviewer then you buy if you like

Probably one of the easiest things you can do is spoof the .exe extension to look like a .jpeg extension and then change the icon of your file to look like the default Windows jpeg icon.

Thats just spoofing. Your not hiding anything in an image.

Viruses must be .exe . You can't hide into .jpg , .png etc.

shivam1234564 - September 28, 2018, 11:56 pm

they may be detected by firewalls and antivirus
