I tried installing yesterday , worked fine but you cannot login. Think the devs @ KIK patched it RIP

I have kik++ from tweakbox and it's been working for me. I have noticed it being pretty buggy sometimes closing my app when I go to send a pic in a chat

App valley & Ignition kik won't let me access my albums on my iPhone 8 with IOS 12.1.4 However on my iPod touch running 9.3.5 it works fine, though it's kind of slow. Might JB the iPod touch so I have no problems.

Could you let me know what you did to fix as well?

Well everytime kik + +

Goes down you can usually immediately reinstall however my camera suddenly stopped working on it.

I uninstalled and reinstalled and it says no

Camera access even though i gave it access in my settings

Jailbreak it and you'll have all the access?
