Thread: [Target recon \[skip recon and start exploiting\]](#)

ghost_brother - September 22, 2018, 11:19 am

Looking for your next target?

Information on dozens of vulnerable servers without having to touch the target.

Skip straight to exploiting the target. Can footprint and scan custom targets.

Information can include:

- IP address
- DNS info
- Open ports
- Services running
- Exploitable vulnerabilities
- OSINT
- Default password
- Operating System
- Technology used by company
- Location Information
- Subdomains
- Hidden files on websites
- Emails associated with domain
- Network architecture
- Zone transfers

\$5 up front for custom scans

(plus additional fee for information gained)

For list of prescanned targets pm me

No government, military or ISP servers.

Not responsible for what you do with information
