Thread: [Rats, crypters in python](#)

JustAsk1ng - September 25, 2018, 2:38 am

I am learning python language your answer won't change my mind of changing the language learning but i wanted to ask if with python language i can code RATS and crypters (reverse shell with features for sure)

Cause i know python language is very simple language when u know it :) but its very simple to FUD a script and get it bypass AV

Why r crypters and rat usually written in java or c?
(Not just because you need to convert py to exe later)
Is it possible to it with python?

Infamia - September 25, 2018, 2:58 am

Yes, it is definitely possible in Python.

JustAsk1ng - September 25, 2018, 4:37 am

You mean to ask whether you can design a GUI in Python by using a similar creator-like program Visual Studio supports for C# and VB by its form designer thing?

Not specifically the form designer, but there's a library called pyqt which inherently allows you to use a tool called Qt Creator, which it self has a UI designer for the .ui files produced and used in Qt. The files exported are importable and usable in Python, I have examples if you'd like, you can map function calls to certain trigger events, for say, button clicks, radio button marks/unmarks and so forth. It's cross-platform last time I checked and fairly efficient.

It is very much possible theres a project called pyiris on github which is basically a modular RAT written in python

Skidsuper - November 28, 2018, 7:16 pm

Its definitely possible to create good crypters in python. I don't know if its same for a rat or botnet stub.

StreetSquirrel - November 29, 2018, 9:55 am

I saw this python crypter a while ago, idk if it will pass the av or firewalls but try it

<https://hackforums.net/showthread.php?tid=5905476>

JustAsk1ng - November 30, 2018, 12:31 pm

:(is there another source of the file maybe github i can look into it?

After viewing the video of his "crypter", I guess you could say it was a crypter in the sense that it can encrypt text and decrypt text. But as far as evading AVs, I would sure hope so since it doesn't appear to be executing anything malicious. All that is happening in that "crypter" is the text being encrypted and decrypted. Not a file. I would love to see source code to a python crypter that uses something incorporating RunPE (plenty of Github source code out there:

github.com/oueldz4/runpe/blob/master/runpe.py) which has a legitimate chance at passing some AV's.

Is it possible to it with python?

100% is possible, I've been messing with some source I found on git-hub and have integrated opencv based webcam viewing and such. I even linked it to a MySQL db for authentication and dynamic connection assignment (When the client is run it checks the DB for connection information instead of it being hard-coded)

SIM-1866423 - December 10, 2018, 5:55 am

" its very simple to FUD"

you need to understand what "script language" means, pyinstaller embedding entire python interpreter into executable that's the biggest reason why py executable is fud(coz size min. 3-5mb lol).Also every py exe is can reversible into source codes no matter what, that's why makes python useless to coding that kinda stuffs because anybody can disclosure your source codes to entire world in like 2minute or something.
