I am a little troubled.
Startup does not work. any help?
I want to crypt your Minergate Silent Miner.
How can I set it up to work? startup options.

This crypter maybe working well.
crypted file is not FUD. nearly FUD.
But bypass windows defender by add certificates is very easy and good.
There is a problem of enlarging the file size.
(silent miner stub is 5mb. crypted file is 8mb.)

Hey, I'm using a hidden startup method.

So it's normal that you do not see your file in msconfig / startup folder.

I will add a method startup a little more basic.

For Minergate miner, I will take care of it and correct the size of the stub.

I will release update soon.

Thanks

Has a new stub been released yet? Scan time seems to work ok but the moment i attempt to execute on VM with avast free addition on it, avast stops it from executing and says "Hold on this might contain something bad" and runs a deep scan on it and is detected. Not to worry I dont have any data being submitted to avast turned on.

Yes works with Quasar and Cerberus ?

Binder works like a binder ..

Possibility to run the binder file once only to avoid launching the file on startup.

Binder file name will be the default name of your file.
