Thread: [kali linux\(ASAP\), cmd hacks](#)

Ricky Lee - September 28, 2018, 3:47 am

Hi guys I wanna know how to install KALI LINUX.... BUT if I install the file, god demn it "NERO BURNIG ROM" comes out and annoyes me.... and Can you tell the specific ways to download the file?? (ASAP)

And can you tell some hacking prnts in cmd?? I'm eger to learn!!!!

Plz tell me the specific way to download KALI LINUX

Plz tell the specific ways to install KALI LINUX!

piratedepp - September 28, 2018, 4:24 am

I'm not even sure where to begin.

You may have heard that kali linux is a good OS for hacking and that's true but only if you know how to use it.

Think of it this way, a plane is a great way to travel long distances but if you don't know how to fly a plane you're just going to be stuck in a cockpit trying to figure out how to fly and almost certainly breaking your plane in the process.

Right now you're asking how to buy a plane with no idea how to use it.

You're going to install kali open the drop-down GUI and spend a few minutes being fascinated by the tools and then realise you have no idea what you're doing and try to learn how to use linux in one of the worst operating systems to learn in. Trust me I did the same thing with backtrack way way way back when and I wish someone had given me the advice I'm about to give you.

I suggest installing an nice user friendly Linux distro like Ubuntu,debian or Mint along side your windows OS. Get to know how the Linux works and get familiar with the bourne again shell. Force yourself to use it. Learn how to write some scripts to automate some tasks for you. Once you get to this stage you will have a better understanding and might actually be able to make some use of Kali.

Keep in mind that I don't know anyone that uses Kali as a day to day OS.

Google the developers offensive security. they will have direct download links.

Honestly if you cant find kali you should really take two steps back and get off on the right foot.

I foun the link but when I download, it comes out NERO BURNIG ROM

CyberStrike - September 28, 2018, 11:48 am

Oh my .. how about using it in a VM and not installing and accidentally going something you will regret. Also if you have no experience with Linux start out in a VM as suggested with Ubuntu.

Books are great too Kali Linux Revealed is free and published by Offensive Security.

<https://www.kali.org/news/introducing-kali-linux-certified-professional/> (Look at the very bottom "Downloads" "Kali Linux Revealed Book")

<https://www.offensive-security.com/kali-linux-vm-vmware-virtualbox-image-download/>

Install VirtualBox or VMware, these tend to spin right up.

Yet once again one should state that tools do not replace knowledge nor experience, and the knowledge is built upon, much like constructing a skyscraper if the foundation is non-existant or not well built the building will inevitably fall.

I started out with Kali Linux. it was hard at first but I learned fast. it's like being thrown into an arena to fight for your life. if you don't figure out how to use it, that os will kill you lol

jocooter - October 6, 2018, 8:17 pm

I agree with SilentWatch, start with ubuntu so you don't get unexpected knocks at your door from people you would rather not talk to

theodoor - October 6, 2018, 11:01 pm

Download VMworkstation and the KaliLinux.OVA file. It installs itself. But before you do ANYTHING, watch the longest video you can find about learning Linux Ubuntu functions. Then pick something you want to learn about, whether it is MITM attacks, hacking over LAN, SQL Injection, and start from

the bottom up. Also, read some books. It helps.
