Thread: [Will the human species ever go extinct? if so how?](#)

Yu Yan - September 28, 2018, 4:10 pm

I think that the human species will go extinct at one point, there is alot of proof that millions of years ago planet Mars was full with life, that went extinct aswell, the dino's went extinct, it's just matter of time before we go aswell.

I think that world war 3 will end everything for everyone.

Mr. Robot - September 28, 2018, 4:12 pm

Almost did when Hillary Clinton almost got into office.

SIM-3257834 - September 28, 2018, 4:17 pm

We may see a end if we aren't too careful with AI and our dependency in technology. Mankinds greatest accomplishment can be it's downfall.

Crypt - September 28, 2018, 4:28 pm

As others said, we almost did if Hillary got into office haha.

If we don't eventually colonize other planets then, of course, we will go extinct eventually; I think we will in the near future though.

Bluffer - September 28, 2018, 4:31 pm

Yes in about a thousand years. Or at the very least a few hundred years from now.

I believe it would be from natural disasters as a result of global warming.

Business - September 28, 2018, 4:37 pm

Yes the human race will go extinct. We won't be around to see it happen though.

?ystem - September 28, 2018, 4:53 pm

Where did you hear that Mars once had bountiful life that went extinct? I think you're hearing incorrectly from people, or they exaggerated Martian theories.

Mars once probably had bountiful oceans, but there has been no evidence of any multi-celled organisms, such as trees or even animals. If anything, maybe some forms of bacteria, but that's it for now.

Now, I'm not certain our species will ever go full extinct. With possible meteors that could cause extinctions, we would know YEARS before, and thus gave enough time to solve that problem. Ice age? Our species survived the last one. Nuclear fallout? Doubtful, considering there's bunkers everywhere, etc.

Once we get our heads out of asses and take space exploration serious, we'll eventually populate other places. Colonies on Mars, the Moon, some asteroids, and later on, other moons when our Sun begins its deathroll to becoming a Red Giant.

Global warming? We have methods to help reverse the runaway greenhouse effect, so we avoid

becoming Venus 2.0.

Yu Yan - September 28, 2018, 5:06 pm

There are a lot of photos online from NASA's latest Mars mission.

Photos of many metallic objects, parts of buildings and spacecraft looking parts, structures that look like city structures.

Research the NASA 2018 Mars mission, I find it quite interesting.

Gliese - September 28, 2018, 6:19 pm

Quote: there is a lot of proof that millions of years ago planet Mars was full with life, that went extinct as well

No, there is proof that Mars could have possibly looked like Earth. There is no proof that Mars ever had life; that would have been an extremely huge discovery.

Yu Yan - September 28, 2018, 6:22 pm

Read my post above yours.

emotionnull - September 28, 2018, 6:39 pm

I've watched so many videos explaining different ways the world would end. My guess is on nanobots or AI.

Shad0wM - September 28, 2018, 7:51 pm

Global warming? We have methods to help reverse the runaway greenhouse effect, so we avoid becoming Venus 2.0.

Now this is some real knowledge, thanks for this.

Yes, I think we will go extinct at some point in the future, at least we will on Earth. Hopefully our extinction isn't due to our own actions as a species.

Can you link me a few vids?

Elitas - October 31, 2018, 6:47 am

I wonder did Mars have internet. This could explain why so many stupid websites exist.

Spoiler [\(Click to View\)](#)I'm obviously joking.

Adsmte - October 31, 2018, 7:12 am

prolly when everyone love the same gender which will no longer have babies and it will be the extinction of the human race. thats what i know .

SIM-1349466 - October 31, 2018, 7:18 am

Definitely. I'm not even going to guess how, but it'll eventually happen.

Banter. - October 31, 2018, 7:23 am

i believe mankind will kill mankind, maybe not in our lifetime but we as a human race have such little respect for our planet.

its just a matter of time.

Yin Yang - October 31, 2018, 7:28 am

Yes by aliens bc we're degenerate scums

Kuldar - October 31, 2018, 7:51 am

Well isn't it inevitable? At some point, everything goes extinct.

Probably the best response I've seen to a thread in a long time.

Elitas - October 31, 2018, 8:47 am

No. We'll never die out. We'll last forever, infinitely, there is absolute 0% chance of us becoming extinct..... Yeah right.

Yin Yang - October 31, 2018, 11:21 am

SolarRay - October 31, 2018, 12:12 pm

Organic life is all that we can evolve to be. Life recreates itself, look at spores. (can survive space travel).

Our destiny lies above us.

Heres a bunch of theories in one video. You can google them deeper.

dontspamthisplease - October 31, 2018, 2:38 pm

I mean, not even the universe is infinite, there is gonna be a heat death and we'll all die, rip

Allelujah - November 21, 2018, 6:57 am

Yes. All species are set to expire at the hand of evolution.

Evolution will push humans into another species. Takes about 1million years for a major evolution, and we've only been a species for 200,000 years, roughly.

Nice point of view. I am completely with you.

Captianjack - November 21, 2018, 8:31 am

I don't know who said it. But if world war 4 happens. It will be fought with sticks and stones. So I believe that we could still be on earth for millions of years. Or only a few generations.
