Thread: [Tabcontrol in metrostyle ?](#)

sgames - September 29, 2018, 2:04 am

Hello,

i use in my project MEtroframework... it have many bugs, and i must leave it. So i make buttons, tiles etc "homemade" but i have verry big problem with tabcontrol.

default windows is really ugly, and i need something like in metroframework (see screenshot)

image is here <https://www.dropbox.com/s/dgedgkpnfojnsvg/Screenshot%202018-09-29%2010.58.33.png?dl=0>

i cannot use MF because i use resizing, ant all metro components have fix font height.

Any ideas of great tabcontrol with sizing ?

You can use My [MetroSet UI](#) which I released last year, it has many controls with the most user friendly and customizations.

What's the part of the control you want to be resizeable? The Tab header?

<https://youtu.be/ALXwiJ6W7fU>

Look at this video. I need scaling tab headers.

Problem is with fix sice of font. (small, normal, big, bold etc)

i have function, that check all controls , and compute scale between original and new form width / height, and with this ratio scale font on objects, and their size and location.

after all, i can resize whole form, and all object on in is always same, only bigger, or smaller.

sgames - October 15, 2018, 10:19 am

any ideas how to make it please?
