Thread: [Best way to stay anonymous online?](#)

Superstar7 - September 29, 2018, 3:24 am

what is the best way to stay anonymous online, yeh you can use VPN but you would have to use your real deatils inc credit card details to make payment, so not really anonymous, get a fresh IP? or use a proxy? what is a good stealth option you guys recommend

sh4moon - September 29, 2018, 3:27 am

I believe Kevin mitnick wrote a book on this called the art of invisibility. it's really in depth and interesting. you should check it out

Infamia - September 29, 2018, 3:28 am

Quote:but you would have to use your real deatils inc credit card details to make payment

yes that's how payments usually work, that or make a stealth account with some virtual card and make payments using that under a fake name

s1nister - September 29, 2018, 3:31 am

You want to make payments without revealing your identity?

There's something called Crypto Currency nowadays.

You can easily pay for anything via BTC.

Or you can buy a VCC via your crypto.

Superstar7 - September 29, 2018, 3:34 am

getting bitcoin requires ID not easy to get without ID on Coinbase, getting a VCC is not easy, if you know how do PM me

(Sep 29, 2018 03:28 AM)Infamia Wrote: [\[CITE\]](#) yes that's how payments usually work, that or make a stealth account with some virtual card and make payments using that under a fake name

Crypto requires ID to buy with ewallets etc, is it really stealth?

don't use coinbase?

go use blockchain or someshit, coinbase is more geared towards people selling/buying on the crypto markets, which requires identification (which is something you don't want to do i assume)
i could try get you a vcc but it seems you're struggling with even staying anonymous so that vcc would prob get declined instantly

Superstar7 - September 29, 2018, 3:39 am

Please PM for VCC details and what you recommend to stay anonymous online?

(Sep 29, 2018 03:38 AM)Infamia Wrote: [\[CITE\]](#) don't use coinbase?

Crypto requires ID to buy with ewallets etc, is it really stealth?Why in this world will you make an ID in Coinbase for stealth?
Go use Blockchain shit or offline wallet.

And if you want to stay anonymous get these stuff:

- 1.TOR browser : unnecessary but for extra sec
- 2.Proton mail
- 3.A "PAID" VPN which "doesn't keeps logs:
- 4.Switch from Google to DuckDuckGo
- 5,Use privacy badger and FireX proxy for normal browsing sessions

How to Leave Google Behind: Quick Guide to Take Back Your Privacy Online.

Stop using privacy-intrusive services. Now is the time to leave Google, Facebook & Co.

For many the Internet is Google: Search, email, videos - Google is the major player in all these fields. But Google uses all data it gathers across its services to post targeted ads, and to massively profit from the data many share so freely with the Internet giant. The time has come to stop this unlimited data mining and to take back our right to privacy! Here's a quick guide as to how you can use the Internet without sharing all your data with Google.

An increasing number of people understand that everybody wants their data, and that there's only one way to stop mass surveillance: by using privacy-friendly tools, best with built-in encryption. With privacy-friendly tools growing in number and in quality, more and more people are starting to protect their personal data.

Even Google now understands that more people want to protect their private data. Google now promises not to scan your emails, however, this might very well be just a marketing initiative. Everybody knows that they are still able to scan your entire Gmail inbox. The no-scan policy might end like Gmail's end-to-end encryption project has ended: in limbo.

Switch from Gmail to Tutanota/Protonmail

For the most private alternative to Gmail, try encrypted, secure email service. The entire Tutanota mailbox is end-to-end encrypted so that it is fully protected from snooping eyes. Even the developers cannot read your emails.

You can automatically send end-to-end encrypted mails, too, so that you can be sure that only you and the intended recipient can read your emails. Because of the encryption, Tutanota cannot

harvest your data for advertisements, in fact, there are no advertisements at all in Tutanota. On top of the end-to-end encryption, Tutanota

lets you register an anonymous email account without asking for a phone number. uses state-of-the-art SSL protection, supporting DNSSEC, DANE, DMARC, DKIM, PFS & STARTTLS. receives an A+ rating on Securityheaders.io. Gmail on the other hand does not get an A rating.

Protonmail/Tutanota are the best open source email alternative with its Android app published on F-Droid.

[Read this to find out why everyone should use Tutanota instead of Gmail.](#)

Stop using Google Search, try DuckDuckGo and Qwant
Google search is widely used because in the past it was the only one giving reliable results quickly. However, privacy-friendly search engines have caught up over the past few years, and there is no reason at all not to favor those. We recommend trying Qwant, based in France, and DuckDuckGo, based in the US.

Switch from Chrome to Brave, Firefox, or Tor Browser
Today there are several browsers that give you much more privacy protection than Google Chrome. Brave is an open source browser that automatically blocks ads and trackers. Firefox is a well-established browser known for respecting user's privacy. If you need extra anonymity when browsing online, I recommend the Tor browser.

Stop using Google Drive, try Tresorit
When using Google Drive, one must know that all files are stored unencrypted on Google servers. Everyone gaining access to these servers can easily copy and read those files. An encrypted alternative is Tresorit. The paid service offers end-to-end encrypted file sharing and sync. You can store your files securely encrypted in the cloud without the threat of anyone else accessing or reading your files without your permission.

Watch Videos on Vimeo, not YouTube
A great alternative to YouTube is Vimeo. If the video you are looking for is not on Vimeo, you can search and watch YouTube videos on DuckDuckGo via YouTube's "youtube-nocookie" domain. While not entirely leaving Google here, this gives you better privacy protection.

If you absolutely want to watch a video on YouTube, we recommend watching it via Hooktube in a browser or via NewPipe on Android.

Hooktube is a YouTube proxy, which allows you to unblock YouTube videos, download videos, and get around YouTube censorship restrictions. Watching videos via HookTube keeps your data from Google.

Use OpenStreetMap instead of Google Maps
OpenStreetMap is a great alternative to Google Maps when looking up places online. It's an open source project with the aim to create a free editable map of the world.

Stop using Google Play, get your apps from F-Droid
In case you are using an Android phone, it is a bit harder to fully get rid of Google. In a first step, you should get all your apps from F-Droid instead of Google Play. F-Droid is a great alternative, especially for open source enthusiasts. By getting your apps from F-Droid you can be sure that they come without any ties to Google.

Change your Android system to LineageOS

In case you are using an Android phone and fully want to get rid of any tie to Google, we recommend that you install LineageOS as the operating system on your phone. LineageOS is a version of Android which you can use without a Google account. LineageOS is the most popular fork of the discontinued CyanogenMod project.

When you want to get a new smartphone, take a look at the upcoming Purism 5. It is Google-free phone that focuses on privacy and security.

Use Mastodon instead of Facebook

2018-04-04: Due to the recent Facebook scandal, I felt the need to update this post and add privacy-friendly social media alternatives.

The business model of most social media sites is like Google's based on tracking and posting targeted advertisements. Therefore, we recommend that you stop using Facebook for sharing your private information with your friends. A great alternative is Mastodon, you'll also find us on Mastodon, or Diaspora.

Use Tor or a VPN like Private Internet Access

When using the Internet your Internet Service Provider can see, monitor and log every website you visit. If you want to make sure that your browsing history remains private, we recommend that you protect it by using Tor or a VPN like Private Internet Access.

Make the switch today, change the Internet of the future!

We all know that mass surveillance is always present when you are online. Yet, each one of us can make a change by making online surveillance harder. One major step to achieve this is to start using privacy-friendly services - if possible with built-in encryption!

And you'll find that taking back your privacy is much easier than expected.

Free your data from mass spying!

and get your encrypted mailboxes for free.

There's no payment required to have access to TOR,

There are some VPN which keeps no log about your data and browsing history and are not bound to share them to Feds.

And you can always use crypto to buy services, without giving much information about you.

Elysium - October 5, 2018, 5:49 pm

The long story short version to anonymity would be to use a prepaid card to purchase a VPN, use crypto currencys for payments, and use an encrypted email service.

Install Kali into an OFFSHORE VPS (a VPS in another country that cannot get you in trouble)

SSH into the Kali VPS

use TOR to hide the VPS IP (somewhat well)

Also USE BITCOIN to pay for VPS

And access VPS from a McDonald's WiFi or someshit

(Oct 5, 2018 02:21 AM)Whiz_ Wrote: [\[CITE\]](#) There's no payment required to have access to TOR, There are some VPN which keeps no log about your data and browsing history and are not bound to share them to Feds.

But TOR tends to leak DNS information... You are REQUIRED to use VPS to remain at least a level of secrecy...

There is nothing stopping your ISP from using a supercomputer to crack any encrypted packets... The only way to REALLY stay anonymous is use a coffee shop PC and connect to a VPS

Tempr5 - October 5, 2018, 6:01 pm

I just use a VPN to be anonymous. I wouldn't see why that is a problem.

Whiz_ - October 5, 2018, 6:08 pm

I have already shared with him that he can easily buy a VPN via Crypto,
But OP was asking about payment to use TOR, which isn't required.
So, I guess my answer was apt for it.

which prepaid card?

You can buy a prepaid Visa card at almost any gas station or grocery store.

ArmDegree - October 6, 2018, 9:29 am

Use HideMyAss VPN PRO, ExpressVPN or some other VPN that are bulletproof.

Other then that you can use sock5 services. There are sites like 5socks.net that have sock5 service time limited.

The socks over there are very fast and absolutely no logs.. Better keep in mind to Always hide your real ip from everything online!

Justforyou™ - October 7, 2018, 12:08 am

This for instance, there are multiple. Check your local stores. Here a prepaid visa Cc goes for a minimal purchase of 25euro.
