Look into tron, you can buy large quantities since they're super cheap. But of course do research before you invest in it.

So?...

Just because "you can buy large quantities" of a coin, doesn't mean it's a good investment.

If that's the only factor you consider before buying into some bullshit shit coin you're better off cashing out and go to the casino. ?

No it doesn't... That's not how it works.

trololol95 - September 30, 2018, 9:25 am

You should ask yourself how much risk I want. If you want less risk then normal you should buy a coin in the top20 or 25. those coins will be there for a while. If you want more risk(I like more risk) you can buy a coin who is not popular and not many people have them.

Also you should ask yourself is you want short or long term. That are all question that you should ask yourself. On this forum there some topics about different coins. Even bether check the cryptocurrency forum there is a lot information

Might as well cop ethereum while it's on sale

Yarumasi - October 1, 2018, 9:58 am

Honestly, I feel like Ethereum is going to boom hard during the bull run.

It'd be a good & safe investment, I truly don't see Ethereum going anywhere lower than \$200-\$250 for quite a long time...

Over a long time. OP is looking for a pump and dump. Tron is gonna be a coin that never gains large value quickly
