TL;DR: it sucks

So it took me a little bit to get it working, turns out you have to get in a match than use it, so thats my fault not the hacks although it could have had an explanation. First problem is the menu is its own application you have to run every time to change settings not that there is many which brings me to problem 2, there's almost no customization, hacks very simple with small functionality it just has the basics, walls, aimbot, triggerbot, no recoil, and bhop. And those arent even that special. There's free cheats I'd pick over this. I literally use cheats in GMod from 5 years ago that has triple the functionality this does. I won the giveaway for a free 24 hours of this cheat and I still feel robbed.
