Thread: [Wizardli: A YouTube to MP3 downloader \(Node.js + Angular 6\)](#)

Super - October 1, 2018, 8:40 am

Hey all,

If you have the time, please take a few minutes to check out the website I've been working on! It's a YouTube to MP3 downloader coded from scratch in Node.js. The webserver is powered by Express, audio transcoding is powered by ffmpeg, and the frontend is built on Angular 6.

<https://wizardli.wintermute.technology>

Try it with this video! <https://www.youtube.com/watch?v=QgxFlvzkZNs>

Features:Download music in perfect 320 Kbps audio quality. Just paste in a YouTube video link!

Extremely fast audio transcoding powered by [ffmpeg](#) on the backend.

Sexy UI that adapts to whatever link you paste in!

Frontend and backend completely coded from scratch.

Full HTTPS encryption.

Let me know what you think! And if people are interested, I'm happy to share the source code.

?

Dynamo

Was expecting rickroll when opened the "try with this video" but I wasn't blessed with rick astley's face :(

On serious note, the website does its job perfectly. Checked the server side code too and it's very well written. Good Job.

P.S. also checked your resume and judging by the community service you have done you seem like amazing person. I like you :D
