Thread: [Vps Company for Port Scanning + brute](#)

SheLiedsheWas16 - October 5, 2018, 12:49 am

good morning i need provider which will allow me to scans for 5days 2 weeks+ for port scanning + bruting

i know servers dont allow this,but some hosts in china etc i know it wud take while for my host to get shut down, ive tried 4 diffrent companies and within few hours my host is shutdown i have trying scanning behind vpns etc on unix
any ideas? thanks

Hello friend, you have more ways to do this.

If you want to perform max scans and brute force attacks, you can use other forms.
As for example, with a Linux machine in virtual with a connection to the TOR network making routing of all the traffic of the machine to the TOR network. So you could make nmap as port scans for example and other brute force tools.
I hope it will help you as a friend without needing VPS or VPS or anything free.

That's "good" if you're doing small things and brute-forcing on a small scale. If you want to mass scan ports or bruteforce thousands of machines it'll be useless and slow.
