Thread: [learning java in school](#)

Free X - October 7, 2018, 6:33 pm

i joined a coding class where there only teaching and learning in java.

i also joined this school about a month after they actually started so im super late in everything,

where can i learn the basics of java, quick in less then a week? iv been doing my research and i have been watching youtube videos for hours. cant seem to get anywhere. i know c++ but they only teach in java.

[Video: <https://www.youtube.com/watch?v=WPvGqX-TXP0>]

Truth. Derek Banas is better than TheNewBoston. Above is a fast-paced video on java, but he also has a slower paced video on everything in the fast video + more.

The creator mentioned in the above posts is good, and you can also check out the pinned threads at the top of this section. You said you joined the class about a month late, so I'd recommend spending some time reading the textbook that your instructor assigned and trying to get previous notes from your fellow classmates so you can be sure you're up to date with the class standards for your code. Outside sources can be good supplements, but notes and the textbook will help you to follow the coding style that the instructor is looking for.

This is the best Java Course that I have seen so far. I am currently studying java in UNI and this really helps.
