Thread: [Who Hacked Me? - Search the internet for hacked data](#)

Super - October 9, 2018, 11:10 pm

Hey all,

This is a site that lets you search the internet for hacked data. Very useful for checking to see if your email or username appears in any database dumps. It's a little project I threw together to teach myself the basics of Next.js, Ant Design and animate.css; it's a fairly simple one-pager, so I know it's not particularly impressive from a technical standpoint.

<https://sombra.wintermute.technology>

Features: Full HTTPS encryption. Your searches are private and unlogged.

Project built with [Next.js](#)

Search is powered by the [HavelBeenPwned.com API](#)

The UI design was created using [Ant Design](#), with animations powered by [animate.css](#)

Let me know what you think! ?
