Thread: [\[RELEASED:\]>\\_Legends Micro Shell\\_\[/.PHP\]](#)

**mObile** - October 14, 2018, 5:44 pm

As you may already know, 40% of servers nowadays have gotten better at detecting the malicious code within our shells preventing a successful upload. =/

So what we've have done is strip out most of the /malicious code to help bypass those file permissions.

At only 4.32KB in size, Legends Micro Shell is one of the smallest shells out there. ?

Features:

- >Readable/Writable Files & Directories
- >Uploader
- >Readable Chmod
- >Kill Shell

So when your c99 shell fails you, try our Legends Micro Shell and get the job done.

Well done mobile! I'm sure many users will make use of a micro shell. Any testing done? Success rate?

Yes, I've been testing it for a month now on several different servers and can say the success rate is around 80% ?

Did you understand the OP?

It's a micro shell so there will be no "features" added. ???
