Thread: [RAT PACK | Tools you probably will need/use](#)

CustomFirmwhere - October 18, 2018, 1:45 pm

Yes, this is my first thread - hi ?

Let me just apologise, in advance, for the pain in the ? for you having to CTRL+C CTRL+V the links, I can't post links/images yet ?

This is just a small pack (5 programs) which are very useful and you will definately need (if you don't already have) to accompany your RAT.

This is nothing advanced or new but I reckon some of you might not know about these and may benefit from them.

Celesty (File Binder)

This can be used to bind your server to another file.

You can bind executables, images, videos, etc.

This is the original one from DarkComet.

Spoiler ([Click to View](#))[i.imgur.com/o1EFhvpv.png](#)

Extension Spoofer

You can spoof the extension on your server to a .jpg, .png, .mp4, etc.

This can be very useful and look legit in a binded file with a suitable icon.

Unfortunately, the max characters for your file name is 6 with this one.

This is the original one from DarkComet.

Spoiler ([Click to View](#))[i.imgur.com/OoIUE0y.png](#)

File Pumper

You can use this to pump your file size (Max 20GB).

This can help make your file look realistic (rather than a few hundred KB)

Spoiler ([Click to View](#))[i.imgur.com/8YP2U1y.png](#)

ICOFX3

This program can convert your image files to HQ icon files and multiple resolutions.

I've included the setup, if you don't trust it google 'ICOFX3' and get it yourself ?

Spoiler ([Click to View](#))[i.imgur.com/DwYTlyH.png](#)

Thumbico

This program can get you any file's icon by simply dragging the file inside the window.

This can be very useful to disguise your server along with the proper assembly and some pumping.

Spoiler ([Click to View](#))[i.imgur.com/jlyxz7G.png](#)

Download: [mediafire.com/file/zzvlfe9vpesm8qj](#)

None of the files/folder have encrypted names, binds, passwords to open or anything - they are all clean. ?

VirusTotal:

[virustotal.com/#/file/d76891784bcf152d126d9c6671e4086ca535edb89a39564c0efbd1f897080ad5/detection](#)

The detections are all false positives, either Gens or they have detected it as a Spoofer/Binder.

Feel free to run these in a VM/Sandbox, they are all standalone apart from ICOFX3 which requires installation.

I did not make any of these programs, all the credits go to their original developers.
Enjoy ?

Where's the poll option that says "I don't need these, they're useless and outdated"

That goes under the 2nd option

NYANxCAT - *October 19, 2018, 6:31 pm*

This is a very nice thread design. Perhaps you can add more tools such as a downloader. Also maybe try updated\new softwares instead of DarkComet plugins.

Thank you, I will look into adding more tools.
