Thread: [Is it possible to control a phone to the internet and control its call/sms features?](#)

Salacity - October 24, 2018, 7:46 am

Sorry for the nooby question, I just have this phone that I would like to control anywhere I go. So if I want to make a call or send a message I would send a command and it would do it and the call/message would be forwarded back to the interface.

J.P.Belmondo - October 24, 2018, 7:48 am

Yes it is possible. Webmonitor android rat does that.

So if I want to make a call or send a message I would send a command and it would do it and the call/message would be forwarded back to the interface. Is that particular phone an android phone? I'm not sure if it's possible if it's an iPhone but for android, apps like airdroid or vysor can do the job.

Google has the answer to all questions except the questions it doesn't have the answer to. hack forums has the answer to all questions Google doesn't have.

yes it's possible to control a phone from far away. try ahmyth or androrat.
