If you want to open a Website in the internet, then use e.g

start chrome h t t p : / / google . com

the URL should be together, but HF dont let me Post links and others sources, coz I don't have more than 50 Posts ?

But if you want to open a local html file, then you must give him the full Path where your html file is.

Example:

start chrome file : / / C:Users/Peter/htmlfile/test. html

here have to be the file URL together

But unfortunately, its not hidden the chrome browser.

Hopefully I could help you a little. ?

Good luck. ?

Good luck. ?yeah i know how to start but the problem i want my script to be executed in a hidden way

PHP Code

```
<?php
```

comand :=

```
'C:\Program Files (x86)\Google\Chrome\Application\chrome.exe --app=http://127.0.0.1/a.html';
```

<https://www.experts-exchange.com/questions/22094428/VBScript-RunAs-Hidden-Window.html>

Use this basic idea to try and launch chrome silently, I do not know if it will work all the same but its worth a shot.

Good luck ?

edit:

So, create a file like "file.vbs" with this inside:

Code Dim objShell

Set objShell = WScript.CreateObject ("WScript.shell")

objShell.run """"C:\Program Files (x86)\Google\Chrome\Application\chrome.exe"""

--app=http://127.0.0.1/a.html", 0

Set objShell = Nothing

edit edit: tested, and doesn't hide the window.. Ill try to find you some other solution.

edit edit edit: read up on: <https://winaero.com/blog/run-a-program-hidden-in-windows-10/>

it seems very possible to do in firefox, but not chrome (at least from my testing)

You should be able to use chrome in headless mode by passing '--headless' to chrome.

It also from my quick look, '--disable-gpu' is needed due to a bug. Issue number 737678.

Example

Code chrome --headless --disable-gpu \${URL}
