How do I get the application ?

You pay, get a serial code and url (they are separated by a blank space, do not include the blank space in the serial or url.), download the files and open the .exe and input your code. Simple ! IE:

Code 8866657b49f69a:de431acaae89 <http://google.com/TinderFlare.zip>

What are the other folders/file ?

One is the sha256 of the current file build. Spiders and Targets are for the bot usage, finally chrome_tinder_flare is the chrome plugin.

How do I use the chrome plugin ?

Open chrome, navigate to: chrome://extensions/

Enable chrome developer mode then click on Load unpacked, browse to the chrome_tinder_flare folder and press ok. You may disable developer mode once done.

How do I use the firefox plugin ?

Open chrome, navigate to: about:addons

Click on the gear button and select Debug Add-ons, Tick Enable add-on debugging. Press Load Temporary Add-on button and browse to the plugin folder. Select manifest.json.

What about Opera/Safari ?

Get chrome or FireFox, if demands are high enough for this, ill port it to the requested browser.

Any discount ?

There will be coupons and giveaways, right now there is a 30% discount on the one week package for few days !

My currency isn't listed ?

As long it's not paypal, pm me about it.

b..bbut will you help me ?!

Sure thing, as long your request is about the software itself. What I will not do: give you hints for niches, how to create/buy accounts, anything else related to cpa e-whore or edgy, anything that isn't morally acceptable (you may endup banned), basically anything that isn't related to the software itself.

Ok, how do I get updates ?

Amazing question, I implemented my own licensing system which will take care of that for you.

Can I share my license/app ?

Nope.

Why do you require admin rights ?

I use windows event logger to log errors and events that may lead to crashes, easier for you and me to diagnose bugs.

My av say its a virus ?

May happen, its packed with known obfuscators. Just add it to exceptions.

Found a bug ! (or the app crash/won't run)

That is part of the support, pm me and we will work things out !

Techy stuff

Coded in c# using 7.0 with lasts framework, you will need that installed. uses TPL dataflow for task handling along with a MVVM pattern so back and front end are split.

Looks promising, best of luck with your sales

RBH - October 25, 2018, 12:37 am

Don't have any experience with [BRAND NAME REMOVED] marketing, how hard/easy is it to buy/create new accounts.

What kind of ban rates are there?

Also you have private messages disabled.

Savoy - October 25, 2018, 1:07 am

Not enough info.

Does this include creating of [BRAND NAME REMOVED] accounts(with proxies I assume)?

Hm my bad, I re-enabled them. I have 4 accounts with the same ip to test ban rates, proxied all of them and none is banned yet. Made sure its obvious they are bots, but [BRAND NAME REMOVED] seems to not care. I do not sell the tools you require to create/buy accounts. But I may eventually give out a script with the bot which would do so.

No, this tool doesn't do that. You can set your accounts you've bought/made to match proxy country or city (or both). I had a user who bought this along with a cheap api for sms and he made bunch of em. I may endup giving out a script to do the same (which can be run on servers for example).

@All, if someone have alot of experience with CPA and is willing to try my bot, ill give out few vouch copies.

Speak your mind friend, I can port the engine to multiples platforms such as badoo/reddit/ig/snap based on feedback.

Sibil - October 25, 2018, 9:28 pm

Are you the developer of that tagged bot in the past?

No, been a while since I sold something on hf.

Flaxpicker - October 26, 2018, 10:29 am

This can probably be used for more than just CPA. eWhoring, Spreading... literally anything if you're creative enough.

You can make tons of money ewhoring through [BRAND NAME REMOVED]. Best part is you don't even have to do anything after setting it up. The bot will do the swiping and the messaging. It can easily be setup to seem lifelike

LoveOverFear - October 26, 2018, 5:48 pm

Alright, thank you buddy, looking forward to it, i'm using something to get followers right now on IG.

Currently getting 80 followers a day and around 1.5k to 2k per month and i just started like last last month.

Would of had more but i went off for like a month and it messed me up pretty bad. Hopefully you can offer something better??

I'll keep my eye posted.

Added, altho have a look here: <https://hackforums.net/showthread.php?tid=5891343>

That works fine with [BRAND NAME REMOVED] accounts and they may implement an api soon.

hfinfo - October 29, 2018, 5:09 pm

Ok I will look into it but are you sure that [BRAND NAME REMOVED] tokens generate with sms verification will work on [BRAND NAME REMOVED] ?

Yup auth token do, just make sure to remember the mail if you want to login again. (tokens does expire.)

New update is live, quick run down:

Code Bug Fixes

- * Proxy export sometimes had blank objects.
- * Reimporting proxies from json caused crash.
- * Set bot display bug. (sometimes show twice an object and click on last out of array)
- * Set bot isn't saved to json.
- * Eventlogger seems to throw even on that try/catch.
- * TinderMatchResult match isn't a bool, causing json parse to throw.

New

- * Display matches/bot messages (cached).
- * Display remaining days and license/user info.
- * Chrome plugin have now a logout button.

does this help with ghosting on [BRAND NAME REMOVED] ?

mackmall - November 2, 2018, 3:34 pm

Do you have any kind of bots that can work with Snapchat?

Not sure what you mean by that, pm me.

Snapchat api is rather painful to reverse, i had once done it years ago and they kept updating their keys/api endpoints. If I get alot of request, ill look into it since they did release their "api" for devs to use.

If I buy will you help me setting up multiple accounts? I always get banned when creating [BRAND NAME REMOVED] accounts...

For now I don't help with that part. May eventually as I said, release a script that will create/dump tokens for users.

Also for everyone, just released this sick update ? !

[x] Map no longer auto-load selected account, they also now ask if proxy set for account before mapping.

[x] Proxy can now be set directly.

[x] Core engine option added, if checked one proxy will be used per account. WARNING: If there is

less proxies loaded than accounts, the extra accounts queued will still be queued but will not use proxy. (may change this logic to not queue if out of proxies).

[x] Bulk edit accounts settings (aka spotify, job, description, target pref, and so on).

[x] Allow random pauses at each 15-30mins for X mins.

[x] Allow to not like twice the same account (either check my app cache or json of the request for a match).

[-] Allow to randomly like user's message (this will most likely end up apart of the humanize feature).

[x] Allow to not like if the user's profile last ping is too old (aka prevent wasting likes on dead accounts).

[xx] Roadhouse.
