Thread: [custom winform control](#)

p9ck4d - November 1, 2018, 2:44 pm

Every time I search for C++ custom winform control tutorial, i get C# stuff

after deep searching, I get C++ winform tutorials, but nothing on custom controls in C++

Help??

Mouse? - November 1, 2018, 3:54 pm

Probably because winforms is .NET.

It's usually an umbrella term for Managed .NET Framework winforms, but it's also a term for C++ windows forms

I've never heard of that being used as an umbrella term, but I suppose it could. I wouldn't know. If I look that up, all I find is Managed C++, which is hellas deprecated
