Thread: [Decryption of a file encrypted with provided keystring](#)

y.alhilaly - November 2, 2018, 1:20 am

I locked my files using a specific encryption software, i forgot the password to unlock it leaving my file encrypted mostly pics and videos, i have the key string used for the encryption (attached, inside system.db open it with notpad).

the decryption method used is called "Scramble & Encrypt File Headers"

I'm looking for anyone who's able to decrypt the attached encrypted photo and since i double encrypted my files out of stupidity so the photo won't be visible after decryption for the first time but i can unlock it as i know what is the second encryption password is.

I'm willing to offer a just compensation for whoever manage to succeed in showing me how to unlock the rest of the pics as they are my wedding pics and i cant just send them over to you.

You probably can't use PM. Email me to discuss details. My gmail address matches with my name on this forum.
