Thread: [Problem to install wlan extension on kali linux vps](#)

owoowo - November 4, 2018, 12:45 pm

Unlike other VMS, i dont have access to its graphic user interface, its vps hosting kali linux Debian amd64.iso.

im a biginnner in pentesting. i was trying to attack a server outside my LAN that was when i lear that i have to turn on monitor mode.unfortunate i dont have wifi adapter installed this is the result i get when i ran iwconfig:

```
Code ~# iwconfig
eth0    no wireless extensions.
```

```
lo      no wireless extensions.
```

i also ran

i got this

```
Code sudo apt-get install kali-linux wireless
```

```
Reading package lists... Done
```

```
Building dependency tree
```

```
Reading state information... Done
```

```
E: Unable to locate package wireless
```

please help. how do i install wireless adapter, am i even heading to the right direction of attacking outside the local area network ?

What adapter are you running? Not all are compatible, especially for packet capturing.

im having this eth0 cos when i run iwconfig i got

```
Code ~# iwconfig
```

```
eth0    no wireless extensions.
```

```
lo      no wireless extensions.
```
