Acid Raindrops - August 5, 2010, 12:30 am

How come I never hear about people using these?

Everyone uses CyberGate it seems, but I have been questioning CyberGate's stability.

These are pretty reputable RATs, does anyone have experience with them and can give some insight?

vq3660 - August 5, 2010, 12:40 am

bifrost 1.2.1d is perfect and you can cyber bifrost server easy in HEX only 30-50 KB...!! very stable RAT

also bifrost server bypass firewalls

poison is a good but is not works in win7 anymore

sorry about my english hopes you understand what i talking about

see bifrost (screen shot)

my victims :)

Shades - August 5, 2010, 12:42 am

CyberGate is very unstable. It's all about marketing and spreading the word. Google the definition 'betamax'. Such as Microsoft betamax Apple, or Bose betamax Senheiser (even though Bose sucks)

I don't use CyberGate anymore, and I can't believe I ever did.

Cerberus is much better, and SpyNet, although not as good as Cerberus, is definitely better than CyberGate.

Gibson - August 5, 2010, 3:42 pm

I think people only use cybergate because it has a very good GUI

but I think Lost door or Darkcomet are also very nice :)

Xycon - August 5, 2010, 4:42 pm

cybergate has alot of options but is very unstable and loses victems quickly aswell

however there are some other rats out there that arent outdated and are far more stable, such as dark comet

Poison Ivy, Bifrost, Darkmoon, Optix

they are good rats, but they are outdated, dark comet is stable and not outdated

ayteck - August 5, 2010, 5:01 pm

well for DC, still waiting for the final release ?, right now, Cerberus is the best ?

fouraces - August 5, 2010, 5:50 pm

What do you guys think about Spy-Net. I have been using it lately and getting a lot of victims.
Bifrost is one of the most stable RATs, though I think it has problems with no-ip, could be me : /

whitenig - *October 29, 2010, 4:36 pm*

nice software optix respect xD
