Thread: [Need ideas for software development!](#)

Odayex - November 8, 2018, 1:44 am

I have been looking around this forum and noticing some trends for types of software sold here.

Are people still interested in:

- Brute forcers
- Twitch Bots
- Bots (for processes or website automation)
- Autoclaimers
- Turbos
- Keyloggers
- RATs

????

If I missed some out then feel free to comment with ideas!

Nick (Name) - November 8, 2018, 11:26 am

Discord bots with a purpose are quite entertaining to develop.

NYANxCAT - November 8, 2018, 2:26 pm

The Premium Sellers Section is already full with these softwares, so yes it's still trending
But you need to think out of the box and add some unique features so you can attract more customers.

Good luck bro

Yeah I have been reading a lot about this. It does pick my curiosities.

What is the native coding language used to develop discord bots?

I seen a thread about a user called Niktoo or something who hired someone to code a cooking discord channel and apparently claimed to have monetised it?

Oh wow!

They have a massive variety of options!

DSharpPlus looks like what I'll be going to practice with!

This ought to be fun!

?

Thanks for the suggestion!

?

An advanced ticketing bot, such as one of mine:

Create a server, invite the bot, bot deletes all channels and categories, it sets up its own categories based off of the categories your classifying your issues, creates its own roles for agents, clients, and administration, all tickets and conversation included are logged to a database and are retrievable to certain roles, you're also able to invite other members into the ticket. Bot is really only supposed to have its own server to operate.

How can I start learn how to code a discord.net bot?

realsunjester - November 10, 2018, 4:46 pm

making software is easy, ideas are the hard thing to come by nowadays.

want a new idea, i suggest staying on top of world news, ycombinator, and other feeds. making money in the dark areas wont pay ask much as an academic or professional app.

for example, people spend millions on themes, just themes! its crazy.

Or just keep asking the members of the forum I wish to sell my products to.

Finding ideas isn't hard at all. Finding what users of this forum want now that's challenging...

Thanks for the useless information.

Thanks for everyone else for contributing.

Keep ideas coming!

No, finding a user that is going to pull through with his/her side of the deal, or find a user that isn't going to gripe about you having a 'high' price, that's challenging.

Begin to learn how to code using discord API, As one of the other members here so kindly pointed out to me. Now I have been creating private discord channels with personal features to make it more interactive for users who join. Like bots to provide me joke pictures when a specific keyword is typed. Great fun

This is very true.
