Thread: [File En/Decrypter with Fernet](#)

ektoblast - November 9, 2018, 7:59 am

Hello HF ? ,

today I want to share a piece of software with you I made in the last 4 hours. It is a File en/decrypter made in python with Fernet encryption. If you have any questions feel free to answer!

Pretty cool, you made this with python? How did you compile it? The way I compile my scripts looks way more messier.

Infamia - November 12, 2018, 7:02 am

upload the source, else post it in another section where binary files are accepted.

DopplerAF - November 12, 2018, 1:15 pm

Please take some time to make a clean, easy to read thread.

Well I compile them with "pyinstaller". You need some parameters to compile everything into a single file. The outcome will be pretty big minimum of 5 Mb but thats the deal.
