Thread: [Provider with the best protection?](#)

Hero - November 10, 2018, 11:46 am

Im looking for a provider that offers the "best" protection.

Probaly going to host a CSGO server on it for testing purposes.

BITW - November 11, 2018, 7:15 am

Did you mean a 'DDoS protection?

I think OVH and Online.net offer 500Gbps or similar protection.

blazingfast offer up to 1TB DDoS protection.

I can be wrong. Please check those.

AFAIK the normal OVH VPS don't offer a great Layer7 protection, but i might be wrong.

Blazingfast doesn't need to be ddos'ed to not be able to keep a uptime above 95%.

Thanks for your response. Are you already using any provider? How much DDoS protection do you need or you are expecting?

realsunjester - November 12, 2018, 7:23 am

for ddos protection, cloudflare isn't too bad, this site uses it. hosting doesnt matter so much as long as it has the speed you need.

I am using a OVH VPS for 3€ or 4€ a month. Im not expecting or recieving any attacks, however i want to host a small gameserver (wont need much ressources) and i want to offer a high uptime. It doesn't need to survive botnets, but stressers/booters.

3 EUR or 4 EUR is a very good and cheap price. Are you not happy with OVH?

cardiak - November 13, 2018, 1:08 am

OVH markets that they are able to withstand 5Tbps DDOS attack, however I'm not sure if they would be willing to risk data saturation to protect some cheapo VPS.
