I cannot write code and I have no idea on how to develop a virus.

I don't even know how to provide a virus scan.

I assure you and everyone else my goal is not to be shady or harm anyone.

please upload to <https://virustotal.com/> and send results

shady as fuck. that website looks like the typical thing that appears when youre watching a free movie online and click somewhere accidentally and get 1000 popups and get infected once you download.

Do you request everyone you opt into to provide virus scans?

I've never heard of anything like this from thousands of subs.

However, I will get to it, and post if for you.

I get it, you're just the first to ask. I ran the test, I'm just trying to figure out how to get the results without the web address showing. I'm on a PC and I'm use to Macs.
