No time to explain but is there a way to recover deleted snapchat messages?

turn off the phone you received them on. Odds are if there is a way, it would be by pulling them out of overwriteable memory

Did you send or receive the messages you need to recover?

Both but I don't have access to the phone it was sent/received on.

I can't recover anything without having access to the phone that originally received the messages. Closing thread was in a rush for an answer.
