Thread: [Always 403 User IP Banned Sentry MBA](#)

Cardboard231 - November 14, 2018, 2:45 am

On another thread I read it said the proxy was banned which is what i thought so i used it without a proxy i used it with 20 different proxy lists and a vpn which i gained access to. All failed. I was using a Config I made and was thinking the config wasn't working. I made it for [escapefromtarkov.com/login](#) and have been using a legit account to try log in. Also when i dont use an proxy it doesn't work works though it does work when i just log into the site. Please help I have no idea what im doing.

In sentry I used the full url though only posted that 1 because i cant posts links with a new account

Have you confirmed you set-up the proxy correctly? It's also a possibility that they have already banned the proxies you have tried since some websites will block known proxies.

Who may i have set it up wrong? I simply didnt check dont use proxy. And inserted a proxy list. Also if a website bans known proxies how would i find ones which are not common. Could this be achieved with a proxy grabber?
