Thread: [Landing Page](#)

.russo - November 14, 2018, 5:13 pm

I've made a very basic landing page overnight (spent very few hours on it) and would like some feedback.

<https://maxwellnewberry.github.io/resibee/>

So far, there's only a few pages - let me know what you think! It's for the most part, mobile friendly.

Lovely? - November 14, 2018, 5:15 pm

Looks cool bro, i usually make the email sign-ups a pop-up when people visit the page so it doesn't fill as much on the page.

Tyronnn - November 14, 2018, 8:22 pm

Simple and nice, a lot of white going on haha.

skull - November 14, 2018, 10:36 pm

I like the layout, maybe add a bit more spacing to the second part of the website, it all seems like clustered together.

Anyhow, great layout.

Thanks for that suggestion, I've made these changes and it looks better.

turbosoggy - November 15, 2018, 2:37 pm

To me it looks very bright and hard to look at, also when scrolling down quickly the top bar becomes fully transparent then re appears like 0.10 seconds later.

Quick thoughts: I think you need to use more color in your design. A lot of people fall culprit to not using many colors (I do it myself sometimes). Adding more color can really improve a website's design. Personally, I'd also add more spacing at parts of the website (specifically the bottom half of the home page - the features section feels a bit too close together). Another place I think would benefit from more spacing is the section that holds the "Our Story" title at the top of the Our Story page.

I really like the mobile menu you've created. It's quite refreshing as I'm pretty used to the Bootstrap mobile menu ?

SinisterSmile - November 20, 2018, 2:01 am

My opinion is to change the light blue color to darker.

hash - November 20, 2018, 2:39 am

Looks good, would change the lettering a bit.

What technologies did you use?

Thanks, Atom IDE - then GIMP for graphics.

I mean languages/frameworks/libraries haha. Like React, Vue, whatever.

I recently switched from Atom to Visual Studio Code, if you're writing javascript it's amazing.

Apocryphon - November 22, 2018, 4:47 am

It looks cool but the main page is too wide.

realsunjester - November 22, 2018, 4:58 am

The margin is different from top to bottom on this section. The bottom, I think it's a nice margin but the top is off. Instead of using head-text for the header in that section, make a new class, for example, add the following CSS and change the class on that div element to section-head-text, and the margin, I think will look better.

```
Code .section-head-text {  
  padding: 35px;  
  text-align: center;  
  font-size: 40px;  
  font-weight: bolder;  
  margin-top: 1em;  
}
```

I would personally have custom CSS for each section, as changing the head-text class will change all of the elements with that class. Just a suggestion.

Aussie - November 22, 2018, 7:57 pm

Very beautiful colour scheme, personally I would find it very hard to achieve the same beauty with the colours you've picked but you did a great job.
