Thread: [\[Guide \] Setup Your Own Mail Server | Send Inbox | No Spam \[Guide\]](#)

IGODI - November 14, 2018, 9:30 pm

Hello HF Members

SeaSpam Guide

Setup Your Own Mail Server

this is meant to those who marketing using Mailbox .

Note: for sorry i can't add images so i will update the Guide once i get 50 post

Requirements :

CentOS : best for this Guide but sure you may use any other Linux system

cwp : [http*: //centos-webpanel . com](http://centos-webpanel.com) Delete (*)

Domain name : you can use free domain but sure paid is most welcome

let's go in details

open your CentOS using ssh client like Putty or any other one

after you open it and logged in first of all we need to know our hostname so type in terminal

Code `[centos@ip-$ hostname]` it will show something like

Code `central-1.compute.internal` this is your hostname okay now let's install required package for cwp

Code `yum -y install wget`

and then reboot your server and after rebooting now we going to install cwp

go to

Code `cd /usr/local/src`

then download cwp

Code `wget http://centos-webpanel.com/cwp-el7-latest`

then start installing it

note: installation may take 10 mints +

Code `sh cwp-el7-latest`

after installation done you will get 2 links and 1 password

cwp http link to your control panel

cwp https link `[b]`to your control panel`[/b]`

Mysql password

you can login with your root server username and password

[b]now follow this steps :[/b]

go to DNS Functions >> Edit Nameservers >>

[b]Now you will see something like

[/b]

Code ns1.centos-webpanel.com resolves to xxx.xxx.xxx.xxx

ns2.centos-webpanel.com resolves to xxx.xxx.xxx.xxx

[b]change ns.1 and ns.2 to your domain name and resolve it to your host ip address

now create user on the panel

go to User Accounts >> New Account

and fill all required fealds then create new E-mail for this user

Go to Email >> Add Email Account

now add your e-mail

after you added your website and e-mail and configured your DNS

open now Roundcube webmail and login to your webmail and start sending inbox

Note : This is not the only way to send inbox some domains need mx record to be added to send inbox and make sure that ur rDns same as your domain[/b]

connectover - November 15, 2018, 5:13 am

Great, simple tutorial man. I hope the hackers of the future catch this because you're about to buried under the tools section.

THIS IS PURE SHIT SHIT SHIT when you say "Send Inbox"

How the fuck do you send to inbox in mass with your newly created domain ?

And do you know there is something called ip reputation ?

Only shitty guys will use this for marketing purpose.

I can gurantee you after you reach certain amount sent, lets say 50-100 or more you will end up in shit hole junk.

OP clearly doesnt know what he is doing.

No one will use this for marketing purpose and no one can send inbox with marketing. By marketing I mean sending emails in mass not send 1 or 10 emails.

This is just basically creating hosting panel and webmail server.

? i think you only copied and paste this shit from someone say this words but let's say u got something right here

everyone in marketing already know that he need (old created and used and whitelisted domain names)

and about the ip part you are 100% wrong cuz ip reputation depending on the all subnet so buying from godady or any known host will do the trick

and about the junk word it will only go junk if your sender e-mail dead or blacklisted

and yeh it's basically creating hosting panel and webmail server this is the idea if u didn't notice lol

Copy paste ?

are fucking kidding me?

you dont know shit about marketing.LOL man

infact you being a spammer you dont know shit about nothing involved in inbox send.
"blacklisting sender my ass LLOLOLOL."
Go on then marketing with you inbox strategy ? ?

stop adding more posts u already proved to all that u don't read and here just to get more posts
please
this isn't marketing strategy at all this is the some tools setup to use if u didn't like it please leave
cuz ur feedback is unprofessional at all

Can I PM you with a root box so you can setup this tutorial as it is ?
you setup your inbox marketing guide in the root box and prove me wrong please ? ?

can I PM you with a server and prove others that who is really not read the tutorial or its just you
being the master inbox marketer ?

? ?

i won't setup it for you if u lazy it's not my problem so stop being kid and go away from my thread
it's not for toxic people

i never said i am marketer but i have good knowledge when it come to sending message inbox
won't answer you again if u don't have something new to add to the people

Dimeblade - November 27, 2018, 1:50 pm

Nah I am not lazy bro. LOL

You just dont like to prove you are full of shit. Your whole conversation just makes everything about
you full of shit.

"i never said i am marketer but i have good knowledge when it come to sending message inbox" ?
? ? ? ? ? ? ?

ma man you are killing me ? ???

This is basically same shit as setting up postfix in a server.

Go learn setting up full configuration for a mail server before posting dumb shit and saying it goes to inbox in marketing.

Now dont tell me you never said its for marketing inbox ?

One - November 29, 2018, 10:23 am

new here need tutorials on how to spam and which leads is best to spam ,

anyone who can throw a light will be happy
