Thread: <https://hackforums.net/showthread.php?tid=5887271>

Well i finally got tired of dealing with this user. I had purchased a sub to his software, tool stopped working over and over.

The user is extremely childish and will use any reason to ban.

Originally things went smooth for a week till the tool went down, at that point he had a private version of the tool that was working, i asked for it and he gave it to me all well and good. Never mentioned anything. Bans me 12 hours later from the tool. Apparently you needed to share your personal entry on it or he would ban you from the product you purchased and the private version. I spent over \$100 in captcha trying to get working values for the user to recieve a ban. I even ended up sharing the value to get banned again a few days later, even tho i havent even launched the tool at this stage. I pm him explain it, unbans me, a few days later another ban.

Mid updates, the user decided to add a rule saying you cant use the tool to sell things under a specific price, which was not agreed on purchase then also limited the tool to a 4 hour limit. Keep in mind im now about \$150 + \$50 + 100 In captcha trying to get this shit working.

Yet another ban

Even past this i tried to help him, by providing him with methods of how his tool got cracked so he could fix it.

Decided to ban me another time, becasue of what "Someone" said with no evidence.

Today again, he decides to unban me because he wants something from me. Within 10 seconds of joining his support server i get banned again. Guess why, because one of his staff hates me, because i exposed him doxing another staff member and attempting to try get me to help.

More of todays chats

Refuses unban. Then has the audacity to ask me for my code from my working bot, because his is pure trash.

Lets get into the saucy part. Lets take a guess how his tool works.
At first i purchased at a user, then decided to debug it, and explore the working method.
He uses credit cards to create accounts. You want some more proof? look at the last few pages of his sales threads, you will see a bunch of people tlaking about cards

Here even made it easier for you and quoted them myself.

(Nov 15, 2018 08:26 AM)demtryrap Wrote: [\[CITE\]](#) custom bin option is not working properly, it doesn't save the good bins, it only saves the bad ones

(Nov 16, 2018 03:46 AM)demtryrap Wrote: [\[CITE\]](#) do you know how bins work? you could have a bin of 48730303xxxx working and 48730xxxxxxx not working, so I can't know which combination works if the bot doesn't save the full working credit number that got twitch prime. also, there's Good_Bin.txt file in the prime sniper folder for a reason... it's just not working as intended and the feature is useless if it doesn't save the working ones

For those of you who know what CCN gate, you know its a tool used to check validity of credit cards.

Not enough proof? Lets see it straight from the devils mouth

Edit: As i was writing this look what he says

Edit:
User Tried to deny it

(Nov 16, 2018 08:56 PM)Spartan. Wrote: [\[CITE\]](#) Nice try Cyn, we don't do carding. We use a public algorithm called the Luhn Check for validation.

https://en.wikipedia.org/wiki/Luhn_algorithm

Next time try harder to attempt to get me banned.
Hmm intresting care to explain
intresting little file there isnt it CreditCardValidator.dll ???

Intresting? Do you want to deny you are also using credit card Bins? Because you forgot i still have a working build

(Nov 16, 2018 09:04 PM)Spartan. Wrote: [\[CITE\]](#) Yep here you go:
<https://github.com/gustavofrizzo/CreditCardValidator>

Free and public, uses the Luhn Algorithm through public BINs.

For those that don't know, amazon checks through the Luhn Algorithm. So when you generate a random credit card that's validated through Luhn Check, amazon registers it as a valid one even though it's completely fake.

Anything else you failure?

You sure about that? You forget to mention you trying to buy credit cards?

"So when you generate a random credit card that's validated through Luhn Check, amazon registers it as a valid one even though it's completely fake."

Okay then do you want to explain why 1000 types of cards pass that check, yet on your bot only the third country banks that have sister banks in the USA with no security or 3d check work ;)

and you also realise that to sign up for prime Amazon pre-bills the card and it has to be approved. Hence why when you rtool runs, even the cards pass the luhn check not all manage to work ? Its ironic how you where asking me for help when it comes to fixing your own bot, asking me for a new method

Quite odd your tool litteraly says ADDING CREDIT CARD ;)

#Skyline - November 16, 2018, 5:22 pm

Wow, so his Primesniper tool is checking if other peoples credit cards are valid or not.

I'm pretty sure this isn't allowed and is very fraudulent.

I litteraly got too tired, he would unban me whenever i helped him with something, then a few days later, not even used the tool because his staff sold me captcha that didnt work and ran away with my money so i left it, and banned again. He is one of those people thatll only help if you give them something.

Dr. Gonzo - November 16, 2018, 5:37 pm

damn. this shit sketchy as hell boi.

B?ker - November 16, 2018, 6:00 pm

This is a big oof. Dang, well I hope this dude gets closed for pretty much selling a card service.

Crypt - November 16, 2018, 6:08 pm

I'm surprised he wasn't closed for trying to sell such a tool.

Pronouncer - November 16, 2018, 6:37 pm

Closing this for now, sending it to staff.
