Thread: [Converts a video to run only on specific computers?](#)

hack3rcon - November 17, 2018, 12:04 am

Hello

How can I create a .mp4 file that just runs on specific computer? For example, if computer name was "Computer-1" then it runs.

Thank you.

You are looking for what is called DRM. Essentially there is no completely secure way of accomplishing what your goal is. DRM is made to be broken.

You will have to pay for a proprietary system.

DRM needs a server but I like other technique.
