Thread: [Is bitcoin complete anonymous/untraceable in 2018?](#)

FeeliNx - November 17, 2018, 3:13 am

Hello!

The question is pretty simple and the title says it all.... is BTC fully untraceable in 2018?

In other words, can a bitcoin wallet get traced? ..and if it can, is there a way to make it so that gets complete 100% untraceable and anonymous?

ZIKO000 - November 17, 2018, 3:14 am

NO it can not get traced and i believe that it will always stay like that, the reason it was made was to make transactions anonymous.

or even a bitcoin address never hear such thing.

Vuln - November 17, 2018, 3:37 am

The transaction itself might not be an issue, but obtaining, spending and storing it in a (truly) anonymous way is much, much harder than most people think.

FeeliNx - November 17, 2018, 4:29 am

wordup! please explain some more...feel free to PM me if not here!

Aussie - November 17, 2018, 4:30 am

You're looking for Monero my dude, with its plausible deniability effect.

You can use <https://xmr.to/> to funnel Monero into BTC, completely untraceable bitcoin to you. Then sell off that bitcoin as you would normally.

Skull-13 - November 17, 2018, 5:59 am

I heard there are services to make it untraceable 100% but do your own research.

?elevision - November 17, 2018, 8:25 am

Yes Bitcoin is traceable dude. If you want to remain anonymous using Bitcoin you would have to go out of your way.

Winds - November 17, 2018, 8:38 am

Question is, HOW can you trace it? I don't think that's possible.

Think a bit bro, all transactions are public on the ledger.

Sisari - November 17, 2018, 2:17 pm

Coin mixing can still leave traces AFAIK

Depends on the way the mixer does it.

they follow the chain. many addresses end up going through a regulated exchange or otherwise.
say you send btc to someone that uses coinbase. coinbase (or someone with info from them) says to them "hey who sent u that" and theyre like "o some dude winds on hf"...then feds go to omni "hey man whats this dudes ip addresses" etc etc etc
