Thread: [\[Mobile suggestion\] Display whos reading current thread.](#)

**Nyx** - November 18, 2018, 4:07 pm

I am currently using my Galaxy s8 with most up to date firmware and on the mobile friendly version of the website I cannot view users that are currently viewing sections, threads or anything at all.

Doed anyone else have this issue?

PS: if this is already a known issue ignore this completely as I could not find any threads about it.

Where did you get this info from?  
Can you source it?

Ah okay.  
Thank you for letting me know.  
Guess I am stuck without the feature til I get my pc back up and running. :(

Oh?  
That is unfortunate.  
I really liked seeing that feature as it helped me to know when someone was ready to reply to my

post.

Omni made a post about it. I can't remember if it was it's own thread or in response to a suggestion
