this isn't how challenges works lol .

```
just put config.is_admin = "1"
```

I don't think you can call this a challenge.

You just use the console to change the javascript on the site and nothing is happening server side. It's as if you just changed the HTML directly using the dev tools in your browser.

?

Great moves, keep it up!

Well it is possible to change over inspect element, you can also use javascript to change the code and you can set the config variable and execute your code directly. Due the fact that the connection is not encrypted you can also use a proxy to set your script to is_admin=1

Not a challenge at all
