Thread: [Computer is always slow, but runs VPS fine while being slow?](#)

Michelangelo TMNT - November 27, 2018, 11:50 pm

My computer is always slow, high cpu and memory. I suspect virus obviously. When my computer is almost non responsive/ I can access my VPS through the non responsive computer finely, switch over to main computer and again just garbage everything.

I have ran Rkill, checked start up and others newbies things but I can't seem to pin point my high CPU/memory issues.

Can anyone help?

Hello there ! ?

First of all;

Are you able to reach the task manager to see which processes are high consuming your CPU and RAM ?

Moreover, is there any unusual activity about your Network (huge amount of packets going in or out of your NIC)? Can you also check your disks activity ?

To access the taskmanager window type :

- > Windows Key + R
- > taskmgr
- > Click on "more details" if you haven't did it yet

why not just rightclick the task bar and click task manager directly? useless touching keyboard for this

for that matter, even ctrl+alt+del is better

anyways, windows taskmanager is piss poor for the job really

try using <http://systemexplorer.net/> as a replacement

Just shows chrome processes running, nothing suspicious.

jennytrump - November 29, 2018, 11:14 pm

see what programs are running in the background and how much memory and CPU they are using,
open Task Manager

PerfectStorm - November 29, 2018, 11:22 pm

You're talking about an RDP when you say VPS right?

It's a habit, I always open things in this way (compmgmt, services, appwiz, ...)

ctrl + shift + esc is the superior method of opening task manager

samanthax8 - December 1, 2018, 5:15 am

what os are you running?
what are your specs?
where are you getting your vps from?

Nyx - December 27, 2018, 7:09 pm

Would you mind providing me with a screen shot of your Disk usage percentage? I know Disk
Usage is a frequent issue that be have and it results in their computer taking forever to do easy
tasks such as opening up a directory or bringing up the start menu.
