Thread: [Need help Turning off/bypassing FRP \(Samsung S7 G930P, Sprint\)](#)

buttbutt1 - November 28, 2018, 7:42 pm

I have a Samsung Galaxy S7 with FRP-locked, USB Debug is off and I am trying to disable FRP and enable USB Debug. Is there any way to do this with Odin or Heimdall?

I also have the stock roms for the phone, and no, the previous owner does not remember the Gmail account she used for the phone.

The Model number is G930P, and the carrier is Boost Mobile (Sprint, USA). I did post to the XDA Forums but I didn't get a reply yet.

Ok first you want to boot into download mode. Flash the eng bl using odin. Place the file in the AP slot. Then reboot to recovery do a factory reset. Then when phone boots open adb and type
Adb shell su content insert --uri content://settings/secure --bind name:s:user_setup_complete --bind value:s:1

The bl and Odin will be in this zip.

I can't get the BL installed. Phone puts up an error. I'm just gonna toss it away. I can't deal with this thing anymore.
