Thread: [Web app vs mobile app development?](#)

MalwareExpert - December 1, 2018, 10:45 am

in the world of freelancing which is much profitable? Web app development or mobile app development?

Do you have any idea?

Omniscient - December 1, 2018, 11:07 am

You should do both. But I think you'd get more work with mobile app development.

Look into Electron. It's the next big thing right now. It's relatively easy to get into and a lot of current programs are coded in it. Skype, Discord, Visual Studio Code and Atom to just name a few.

Website: <https://electronjs.org/>

I've been using it for some personal projects lately and I can definitely recommend it.

Omniscient - December 1, 2018, 12:17 pm

Or HTML5 games. :)

Both are great but mobile apps are the way of the future.

Undefined - December 1, 2018, 1:39 pm

Both are great, though mobile apps have been taking off these days and they are a great way to get yourself out there and develop accessible solutions for a wide community.

Web app dev is fairly simple to pick up & there are many opportunities for work if you're talented.
