Thread: [Hack nearby wireless networks\(wifi\)easily](#)

Sai teja - December 4, 2018, 6:05 am

To complete this process you need linux

Download fluxion program from browser and install it

This process is very easy

Its easy to hack wifi networks via fluxion

Its hard to explain by posting

Go and search fluxion in youtube then do the process there

The reason not to posting it is because my laptop was crashed and later i buy a new one and then i will post hacking social networksx

What this thread means?

Are you asking something or trying to share?

You haven't said much about the "process", you've just given a brief description without much explanation as to how to carry out the "hacking".

Rogers Communications - December 4, 2018, 11:45 am

where do you download this?

Thats because of my crashed laptop

After my inter i will buy a new one and then i will explain all about it briefly

Just go to browser and then just search fluxion then copy the link and download it using terminal
Its hard to explain without screenshots
My laptop was crashed
So i reffer ou to search fluxion in youtube and follow the steps in the video
I posted this thread because at first i struggled to hack networks and after a hard research i found it
This thread was posted to those who struggles like me to hack a network

As stated the Fluxion Dev is here in the forum, so has been already explained, showed, updated.

If you are interested in network hacking i really suggest you to study what exactly fluxion does, how make your own captive portal and then make your tutorial in the right section ;)

ampamer - January 6, 2019, 6:00 pm

fluxion u linset is the same thing
