Thread: [how to send message to WhatsApp via c#?](#)

prohacker2020 - December 4, 2018, 11:34 am

- 1.create a new Windows Form Application in Visual Studio
- 2.in the form add two textboxes with these names: txt_msg and txt_to and add a button
3. in references search whatsapp and add it
4. use this code below:

```
Code using System;
using System.Collections.Generic;
using System.ComponentModel;
using System.Data;
using System.Drawing;
using System.Linq;
using System.Text;
using System.Threading.Tasks;
using System.Windows.Forms;
namespace Send_WhatsApp_Message_Using_CSharp
{
    public partial class Form1 : Form
    {
        public Form1()
        {
            InitializeComponent();
        }
        private void button1_Click(object sender, EventArgs e)
        {
            string From = "phone number";
            //send to
            string To = txt_To.Text;
            //your message
            string Msg = txt_Msg.Text;
            WhatsAppApi.WhatsApp wa = new WhatsAppApi.WhatsApp(From, "generated password",
"Display name", false, false);
            wa.OnConnectSuccess += () =>
            {
                MessageBox.Show("connected...");
                wa.OnLoginSuccess += (phoneNumber, data) =>
                {
                    MessageBox.Show("your message has been sent");
                };
                wa.OnLoginFailed += (data) =>
                {
                    MessageBox.Show("error" + data);
                };
                wa.Login();
            };
            wa.OnConnectFailed += (ex) =>
```

```

    {
        MessageBox.Show("connection timeout");
    };
    wa.Connect();
    wa.SendMessage(To, Msg);
}
}
}

```

how this?!!
i think it's stoped

and how to login first before send msg by this code

```

WhatsAppApi.WhatsApp wa = new WhatsAppApi.WhatsApp(From, "generated password",
"Display name", false, false);

```

```

The project is already dead. Nothing api projects more work... you could try JavaScript-Version.
