Thread: [best LED lights for gaming setup](#)

caaam - December 6, 2018, 12:02 am

What are the best LED lights around? I have seen reviews where people say the \$20 ones of amazon are great but anyone on here used any LED lights for there setp they can recommend?

hp33604 - December 11, 2018, 12:02 pm

I think it really depends on your current gaming setup. How many monitors, room space, type of ambient you're looking for, and so on. What's your current setup looking llike?

PerfectStorm - December 11, 2018, 12:04 pm

Hmm never really though about leds

Just buy some cheap LED strips, they work just fine.

Yeah i would have done that. But before buying you could check around on youtube, for some reviews on cheap LED PC strips, or similar. Just to get a feeling, on how the product peforms.

My buddy had the light strips ass the top and bottom of his his was pretty nicely set up.

haimadinger - December 13, 2018, 5:20 am

You can use the Logitech G560 Lightsync, nice Sound and verry nice ambilight

Spaark - December 13, 2018, 5:20 am

Just buy a cheap couple of led strips. Doesn't need to be anything expensive to give a nice hue in a case. :)
