Thread: [AutoFill/Purchase Bots. Knowledge needed to create one?](#)

UserAtHF - December 7, 2018, 5:24 am

Hello All,

I would like to create a bot that would be able to auto fill out information and purchase limited release items from various sites within seconds. For example, there are many sneakers that get released and sold out within seconds, I would like to create a bot (using Python) that could auto fill out CC & delivery information to increase my chances of purchasing these items. Additionally, the bot would need to be able to take proxies.

I currently have little to no knowledge of Python, but I am keen to begin learning the language in order to create such a bot.

I would appreciate, if someone could list the topics that are essential for me to learn in order to create such a bot.

Also, how difficult would it be to create such a bot for someone without much programming experience?

StarchBombs - December 7, 2018, 5:31 am

lol

since u have no knowledge go pay someone to do it for you as no one is gonna waste their time trying to explain python to you

I'm not requesting for people to teach me, I just would like to know what to learn because there is many programming concepts, but what must I learn to create this type of bot?

Do you know?

FW1738 - December 7, 2018, 8:11 am

Use beautiful soup or selenium

contact me on Skype live:jimparker18 if you have questions

Saitama - December 8, 2018, 8:02 am

selenium if you wanna do it i guess the easy way, or pick up and learn requests package, it has all you need to achieve.

"Also, how difficult would it be to create such a bot for someone without much programming experience? "

1 week(max.) if you familiar with some other coding language.You need to learn,

Libraries,

requests (for pages not required javascript)

re (basic knowledge will be enough for getting page keys and specific words etc.)

selenium (in case of javascript)

And

what is GET/POST

what is http headers

what is proxies

what is captcha

Using the below explanation you should be able to craft what you're looking to make. Feel free to shoot me a PM if you want someone to bounce ideas off, looking for a new project to start.

PM me. if you need help
i am python coder

datguy.dev - December 16, 2018, 3:31 pm

You don't necessarily need Python to do this. I'd probably just write a userscript to run in a browser and VPN for reliability. Proxies suck. If you do go that way, pay for some dedicated ones or you'll miss your window.

To go in depth on this guy ^: This won't be a VERY hard thing to make, but then there are a few things to tackle - and they require a bit more knowledge! Captcha however you can try and work with a anti captcha service.

No. I meant VPN. The reasoning is obvious for most that have an inkling of botting experience.
Give it a try without.

its really not. why would a vpn give you "reliability" ? It is completely unnecessary for these kinds of things.

Feel free to post an example of one of your web scrapping/automation projects at anytime. I already have a few posted.

Good job? I didn't say you were incompetent, just that you made a claim that didn't make a lot of sense. Feel free to stop being a prick and answer the completely innocent question.

The first part of the equation to bottling is creating multiple realistic instances, while expecting fail-over and redundancy. If you have to sift through volatile proxies, you don't have any of those aspects when your application is opportunistic. For example, a second timeout is not something you want to iterate when your window is 1 second. Let alone where traffic is being routed.... I'm sorry. ?

are_you_here - December 30, 2018, 10:12 pm

PM me if you need help ..

Random Arab Girl - January 2, 2019, 3:22 am

you wont be able to compete with the other huge bots trust me i resell quite a bit and whenever i see a new bot they flop it pretty hard

UserAtHF - January 2, 2019, 10:50 am

What do the huge bot owners do differently to the average person that is looking to code their own
