Thread: [Anyone interested in making a small program to sort data?](#)

synboxin - December 13, 2018, 11:54 pm

I was wondering if anyone is looking to create for free. Maybe you're looking for experience, or just enjoy coding. Basically I have a huge list of products with product details. I have another list of product names with prices. I need to merge the list. So I basically need the product ID from the huge list added to the smaller list of product NAME and product PRICE. So basically something to run both the list match the names once matched grab the ID from list1 and PRICE from list2 and put them with the matching name. The one file is over 40MB.

I can do it too if you still need some help

synboxin - December 18, 2018, 3:17 pm

The others wasn't able to do it I guess. They never got back to me. Still looking for this to be done.

+Haze - December 18, 2018, 4:10 pm

How cheeky, you want us to do it for free, and yet, you still require a PM to get more information on the task. Just post an example of the data you need man

itcorp - December 18, 2018, 4:35 pm

After an hour, I'm still waiting files

Just post an example of the data you need man It's private data, I wouldn't want it to be searchable publicly and able to be downloaded publicly.
