Thread: [Fake 404 error page with FireFox support+++ \(easy\)](#)

gigajew - December 14, 2018, 4:37 pm

Now supports Firefox

B?ker - December 14, 2018, 4:44 pm

Really HQ Thread, thank you for this.

Dotexe - December 14, 2018, 4:46 pm

"// hard exit script" ? ? dead

Nachfolger - December 14, 2018, 5:08 pm

I was looking for a good way to fake 404 pages. Thanks dude.

Some free hosts will inject their own content into pages if you don't do this

Competent ones will check if there is an "exit"/"die" and delete it tho ?

Besides, if any host is LQ enough to inject ads into their users websites, then you shouldn't be using that host. Free or not, that's bs.

wheelchair - December 28, 2018, 7:32 am

Wasn't really looking for one, but I guess to have it in your back pocket doesn't bother anyone.
Thanks a lot.

\$browser != 'firefox' ?

0xBB - December 28, 2018, 2:19 pm

Yeeeeeeeeeeah at line 67, you have a possible vulnerability for printing non-sanitized user input.
Yes headers can be changed, further info:
<http://carlos.bueno.org/2008/06/host-header-injection.html>
