Thread: [Looking 4 MyBB, IPB, OpenCart SQLi Vulns](#)

krlo-s - December 23, 2018, 2:27 pm

Greetings hackforums,

Does anybody have any SQL injection vulnerabilities to share for MyBB,PHPbb, Opencart or IPB please? may be paid or free. I already have public available vulnerabilities.

Thank you if you can help me ?

Sincerely yours

~[DogiD]~ - December 24, 2018, 9:01 am

You best bet is to search from Exploit-DB.

~ DogiD

krlo-s - December 24, 2018, 10:29 am

Thank you ~[DogiD]~, I have seen private exploits that takes months before being posted on exploit-db. Are there any private ?

Anyhow there was a SQLi in the last version of MyBB 1.8.18 located on the contact page.

I mean having knowledge of an existing exploit does not necessarily make it no longer private. As long as the person who knows THE exploit keeps how he is using it a secret, it still would be considered private. For example, Say I KNOW of an existing exploit inside of google chrome that affects anyone using the most recent version; that does not mean however that I know HOW it is working, just that I know it exists.

MLT know's his stuff.

He is not going to charge a small amount for any exploits that can be used on the most popular forms of forum software.

Expect to be paying upwards of \$2500 for a single exploit.
