I am struggling a bit with the Social Engineering Toolkit i have tried updating and upgrading in the linux terminal with no luck. The issue i am having is with sms spoofing everytime I make an attempt at using it I get an error. This module is currently disabled as spoofmytextmessage.com is currently experiencing issues. As soon as it is working again or I can rework the module, this will remain disabled. This is the error i get each time.

Any help would be appreciated Thanks! ?

lirc I believe SE kit is already out of date, you're better off finding spoofers elsewhere.

The SMS spoofing module is rather old, and was removed still though you can still use other services, there are several websites that do this, some are paid this should be noted.

You should learn linux first rather than starting out with kali and getting struck on errors all the time.

**ampamer** - December 31, 2018, 4:01 pm

that module is old, i think is not supported

**CheckMyNuts** - December 31, 2018, 6:59 pm

sms spoofing module on Social Engineering Toolkit not updated anymore and pretty old you can't do anything with it right now
